

The Operation of the AquaRain® Natural Water Filter System

The operation of the AquaRain® Natural Water Filter is simplicity itself. No energy is required nor are chemicals necessary for the filter system to work. Water is poured into the upper container where it trickles down by gravity through the highly specialized ceramic filter elements leaving cysts, bacteria and ultra fine sediment in the outer layer of the ceramic. After passing through the thick ceramic wall, the water then flows through a bed of silvered coconut shell carbon which adsorbs pesticides, various organic chemicals, and chlorine (if present), along with objectionable color, tastes and odors. The filtered water then drips into the lower container where it is stored for easy dispensing with the handy lever-action faucet.

Over time, small particulates and bacteria may accumulate on the walls of the elements and slow the production of water through the filter. When this occurs, simply remove each of the filter elements and lightly clean the hard surface of the ceramic with a brush or the scrub pad provided. (Unique end-of-life gauges takes out the guesswork from knowing when to replace the elements.) The elements are then reinstalled in the upper filter vessel. Proper cleaning will restore the AquaRain® Natural Water Filter to full flow rates, each and every time.

~ THE WORLD'S BEST ~ Chemical-Free & Energy-Free Water Filtration System!

Absolute LOWEST Cost Per Gallon, Period!

Model 400: This is the flag ship of our product line which utilizes two high performance filter cartridges set in a 3 gallon stainless steel housing. When kept full, you can produce up to one gallon per hour of quality water for drinking and cooking. The Model 400 is about 10 inches in diameter and is 21½ inches tall including the stainless steel lid and rubber base.

Model 200: This is our smaller version which uses one high performance cartridge mounted into a 1½ gallon stainless steel housing and incorporates the same features as our larger unit. When kept full, you can expect this unit to produce a maximum of ½ gallon of clean and great tasting water an hour. The Model 200 stands 18 inches tall overall and is about 8 inches in diameter.

The ceramic elements used in both models will safely remove dangerous waterborne pathogens (bacteria, cysts, protozoans), adsorb chlorine, pesticides, chemicals, MTBE...*all with an absolute rating of two tenths of a micron for the pore size.* These elements may be cleaned up to 200 times, providing safe and pure drinking water *for less than a penny per gallon!* For ease of operation, for low cost, for peace of mind....the AquaRain Water Filter System is an unique and innovative answer to your drinking water.

Water Filter you may
*EVER HAVE TO BUY!***

OUR DRINKING WATER...Should We Be Concerned?

According to a recent study by the National Resources Defense Council, where an analysis of the Environmental Protection Agency's (EPA) files was conducted, more than 120,000,000 people in the USA are drinking unhealthy water. Forty-three percent of all water supplies in the United States violate EPA health standards with more than 900,000 Americans getting sick each year from rotten water. Every day there is a new report of raw sewage or bacterial contamination of a municipal water system, or some type of chemical contamination of surface waters, or perhaps some other disruption of normal water service. You might have seen some of these critical problems featured in news stories...

- ***The fuel additive MTBE has contaminated water across the USA.***
- ***Water disinfection with chlorine has been found to be carcinogenic.***
- ***Water contaminated with bacteria has caused thousands of people to become ill.***
- ***One-Third of bottled water tested was found to have bacterial contamination.***
- ***The CDC Reports cite numerous problems found in US water supplies.***

The water quality situation is very complex, and especially in light of recent events, it is not going to get better any time soon! The plain truth is that *everyone* needs to filter the water they drink, RIGHT NOW. The AquaRain® Natural Water Filter has been developed for this reason. The AquaRain® provides you with clean and safe drinking water you can trust, all without having to boil your water, use potentially dangerous chemicals, or rely on man-made energy. Thus, even in an emergency with the power off, you can still produce safe drinking water! Our attractive stainless steel housing holds the very latest in advanced ceramic and carbon water filtration technology. Consumate beauty and rugged functionality have come together in the AquaRain® to produce fresh and clean drinking water for your family! Here is the exciting part... the AquaRain® will produce quality drinking water for less than **a penny per gallon!** Truly, the AquaRain Natural Filter System is the LAST water treatment device you should ever have to buy for your family! Please look at these outstanding features found in the AquaRain Natural Water Filter System...

- 4 **Advanced Ceramic Technology removes protozoan cysts and harmful bacteria.**
- 4 **Silvered Carbon Bed adsorbs pesticides, organic chemicals, chlorine, tastes and odors.**
- 4 **Energy-Free System operates by gravity and requires no power or chemicals.**
- 4 **Hard Ceramic Shell may be cleaned up to 200 times and lasts for thousands of gallons.**
- 4 **Attractive and Hygienic Stainless Steel Housing incorporates a unique "Splash Shield" flange.**
- 4 **Manufactured to NSF Specifications and meets USEPA Bacteria and Cyst Purifier Standards.**

The AquaRain® Natural Water Filter was designed and created with YOU in mind. It is the answer for your everyday drinking water needs. Don't delay... order this vital and necessary protection for you and your family TODAY!

The Secret of Our Success...

The AquaRain® system filters water in a very natural way, using gravity to gently draw water down through our "cultured" ceramic stone cartridges in much the same manner as nature processes ground water through the earth. At the heart of our natural process micro-filter are patented high-tech ceramic filter elements specifically designed for the AquaRain® system. The microfine pore structure of our ceramic media will remove dangerous organisms such as protozoan cysts (*Cryptosporidium*, *Giardia lamblia*) and microscopic bacteria (*E. coli*, *Salmonella typhus*, etc...). Enclosed within the hard ceramic shell, we have incorporated a concentrated bed of Granulated Activated Carbon (GAC) that contains a self-sterilizing metallic silver. The high performance of the silvered GAC bed will adsorb various organic chemicals such as MTBE and pesticides, remove chlorine compounds including carcinogenic halogens, and improve the taste and odor of the water. To the benefit of good health, our system will also leave unchanged the naturally occurring electrolytes and minerals found in your water.

You can depend on the proven technology used in the AquaRain® and even the natural concept that it relies upon to produce safe drinking water for your family. The AquaRain® Natural Water Filter is manufactured to meet NSF standards and fully achieves the USEPA requirements of a Cyst and Bacteria Water Purifier. Not surprisingly, the innovative AquaRain® Natural Water Filter System is made with loving care right here in the USA!
